

AMENDMENTS TO THE CLAIMS

1-9. (canceled)

10. (currently amended): ~~Use of the gene of claim 6 in~~ A method for preventing and treating plant diseases[[.]] caused by a bacterial pathogen, which method comprises functional inactivation of a gene identified as *XC1950* encoding a phosphoenolpyruvate synthase protein in said bacterial pathogen.

11. (canceled)

12. (new): The method of claim 10, wherein said bacterial pathogen is *Xanthomonas campestris*.

13. (new): The method of claim 10, wherein said *XC1950* gene has one of the following sequences:

- (a) the nucleotide sequence of SEQ ID NO: 1, or
- (b) a DNA sequence having greater than 80% homology with SEQ ID NO: 1.

14. (new): The method of claim 10, wherein said functional inactivation comprises deletion or mutation of the *XC1950* gene.

15. (new): The method of claim 14, wherein said functional inactivation occurs at the level of transcription and/or translation of the *XC1950* gene.

16. (new): The method of claim 10, wherein said functional inactivation comprises inhibition of the phosphoenolpyruvate synthase protein encoded by the *XC1950* gene.
